

INSPECTION DOOR

Inspection doors are necessary to provide access to material flow or mechanical parts that may need repair. In order to contain dust and prevent spillage, doors should remain closed when not in use. DCI designed a door that is easy to use and provides an airtight seal.

DCI has standard door sizes available and can also build custom build doors to customer specifications. All that is needed is the opening size and DCI will manufacture the door and ship it to you fully assembled and ready for installation. DCI also manufactures heavy-duty doors for crushers and other heavy-duty, high wear and impact areas.

DCI doors are available in mild or stainless steel. The rubber seal on the door provides a 100% seal against dusting and resists weather and moisture related freezing. Door lids are made left or right hand and are removable from the rustproof hinges.

Inspection Door Features and Benefits:

- **Custom built to customer specifications**
- **Airtight seal**
- **Removable door lid**
- **Rustproof hinges**
- **Door can be hinged on any side**
- **Mild steel or stainless steel construction**
- **Easy to use door latch**
- **Heavy-duty – built to last**
